SMART SEAT WITH INBUILT THERMAL CONTROL

Ordinary 2-wheeler seats tend to get overheated during summers and chilly during winters, causing great discomfort for riders as well as passengers. Varroc has invented the perfect solution to this thermal inconvenience. Introducing Varroc Smart Seat, a seating assembly that comes integrated with a heating and cooling module. Equipped with a dual thermal control function, the module cools the seat when it gets too hot and warms it when it gets too cold. Making for a pleasant travel experience.
